

# CheckStyle Report

## CheckStyle Report

CheckStyle is a development tool to help programmers write Java code that adheres to a coding standard. It automates the process of checking Java code to spare humans of this tedious task. This makes it ideal for projects that want to enforce a coding standard.

## Installation

Using netbeans it is quite simple to install checkstyle. You simply add <http://deadlock.netbeans.org/hudson/job/sqe/lastStableBuild/artifact/build/full-sqe-updatecenter/updates.xml> to your path of sources in the plugin center. Then click on available plugins and choose checkstyle. As long as you have above Netbeans 7.1 beta then everything should work out fine.

## Report

The netbeans plugin would not work for us. The checkstyle option was always greyed out despite configuring the pattern xml in Netbeans -> Preferences -> Quality. The final resort involved downloading the jar file manually, obtaining the Sun Standards XML for Java checkstyle and executing it recursively on all java source files.

Although it would take far too long to bring the code to these standards as we do not adhere to the Sun Standards only important changes were made. Below is the output from checkstyle.

```
snow-leo:cmpt371group02 adammravnik$ java -jar checkstyle-all-4.4.jar com.puppycrawl.tools.checkStyle.Main -c checkstylestandards.xml
src/java/.java

Audit done.

## Conclusion

CheckStyle is awesome! It enforces a coding standard to such an intense degree that it makes it hard for anyone to deviate from this standard. It helps greatly in the general process improvement best practice because if there are consistent standards then there is less room for error and bugs become easier to spot!
